BioNuss

Our company's main activity is processing walnut in shell and other oilseeds coming from organic and other farming.

We provide our foreign and domestic partners excellent premium quality conventional or certified chemical-free kernels with organic certification from the best Hungarian varieties with a year-round supply.

Our organic shelled walnut and walnut kernels products, produced in our own processing facilities, are primarily targeted the export markets.

Quality control and consumer information

From 2022, we use digital technology to monitor the processing of nuts in our factory, so the quality and lifecycle of our products can also be tracked electronically.

Seacon Europe's system provides quantifiable information on each step of the processing, allowing us to adapt even more efficiently to customer needs. Thus the wholesalers and consumers alike to check the origin, composition and quality parameters of the product they buy.

DigiNussInfo

We took the first step towards digital manufacturing under the mentorship of Innoskart DIH experts, with the winning DIH-World project.

Innoskart aims to help SMEs in the region access the investment resources, proven technologies, effective methodologies and competences needed to digitise their products and services.
